DETAILED ACTION

The Information Disclosure Statement filed on January 24, 2006 has been fully considered.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin McKinley on September 14, 2006.

The application has been amended as follows: Claims 74, 75 and 77-83 have been canceled

Allowable Subject Matter

Claims 67-73 are allowed over the prior art record.

1. The following is an examiner's statement of reasons for allowance:
2. The closest prior art of record

Stefik et al. (US Patent 5,715,403) teaches a system controlling distribution and use of digital works. Akiyama (EP 1 041 767 A2) teaches a system for authenticating data send to a certified system. The Technology of Rights: Digital Rights Management http://www.kcoyle.net/drm_basics.pdf teaches a system for utilizing DRM for copyright protection.

What they fail to teach or suggest:

A.

None of the art of record, taken individually or combination disclose at least the steps/components of

“second information providing apparatus comprising: fifth reception control means for controlling a reception of said request for purchasing said content from said first information providing apparatus; fourth transmission control means for controlling in response to said request for purchasing said content transmission of said device identification information and said usage conditions to said first information providing apparatus; sixth reception control means for controlling a reception of a request for said content from said information processing apparatus; and fifth transmission control means for controlling, in response to said request for said content, transmission of said content to said information processing apparatus.”

Art Unit: 3621

Even if the features missing from the above cited prior art were found in a reasonable number of references a person of ordinary skill in the art at the time of the invention would not have been motivated to combine these reference because the claimed feature of “ sixth reception control means for controlling a reception of a request for said content from said information processing apparatus; and fifth transmission control means for controlling, in response to said request for said content, transmission of said content to said information processing apparatus ” is not a feature normally associated with providing electronic content and therefore would have to be disclosed by art unrelated to electronic content distribution systems.

These distinct features render claim 67 allowable.

Claims 68 is dependent upon claim 67 and are therefore allowable for at least the same reasons.

B.

None of the art of record, taken individually or combination disclose at least the steps/components of “storage control means for controlling a storage of said information for identifying said another information providing apparatus and for identifying said usage condition in correspondence with controlling identification for identifying said user identification data; second transmission control means for controlling a transmission of said information for identifying said another information providing apparatus and usage condition of said content to said information processing apparatus.

Even if the features missing from the above cited prior art were found in a reasonable number of references a person of ordinary skill in the art at the time of the invention would not have been motivated to combine these reference because the claimed feature of “ second transmission control means for controlling a transmission of said information for identifying said another information providing apparatus and usage condition of said content to said information processing apparatus. ” is not a feature normally associated with providing electronic content and therefore would have to be disclosed by art unrelated to electronic content distribution systems.

These distinct features render claim 69 allowable.

Claims 70-73 are dependant upon claim 69 and are therefore allowable for at least the same reasons.
